

Apromore Task Mining:

Uncover and leverage full spectrum process intelligence

Apromore's Task Mining capability delivers deep insights into how users interact with systems, surfacing hidden inefficiencies, automation opportunities, and real performance bottlenecks. By blending screen-level interaction data with process-level models, Task Mining provides full transparency from click to outcome – empowering business and operations teams to take targeted, data-driven action.

The Challenge

Most organizations struggle to see what really happens at the user level.

- Manual workarounds, repetitive actions, and inefficient system navigation often go undetected.
- Operations leaders lack insight into where delays, rework, or friction originate.
- Without real data, automation initiatives miss the mark – wasting time and resources.

The Solution

Apromore Task Mining offers end-to-end visibility into human-system interaction.

- Captures task-level data from desktops to understand how work happens in reality.
- Analyzes screen activities to highlight inefficiencies, duplication, and variation.
- Identifies automation-ready steps based on frequency, time consumption, and rework.

What You Can Do With It

Gain full transparency into user-level tasks across systems and screens

Reduce manual effort, improve execution, boost workforce productivity

Spot bottlenecks and rework in daily operations – backed by real data

Merge task and process data into a single, 360° operational view

The Results

40% Reduction in manual effort by identifying and eliminating repetitive, low-value user activities

35% Faster task execution by resolving friction points and optimizing user workflows

30% Improvement in operational efficiency through automation-ready task discovery

90% Visibility into user-system interactions across applications for end-to-end task and process alignment

Why It Matters

By linking front-line activity to back-end process outcomes, Apromore Task Mining completes the picture of how your organization really runs – and how to make it run better.

Want to see it in action?
